

Laser Toner Cartridges

10-Step Remanufacturing Process

1. Incoming Raw Materials Inspection

All incoming materials: drums, toner, blades, PCRs, magnetic rollers, etc. are verified against stringent standards before they reach the production floor.

6. Sealing

Each toner hopper is sealed with an OEM style seal. Our quality sealing process ensures a leak-proof cartridge that is easy for the consumer to install.

2. Sort & Grade

All empty cartridges are sorted and graded. Only premium empty cartridges are used to ensure optimal quality.

7. Assembly

Our factory-trained technicians assemble all cartridges with OEM grade compatible components. The assembly process includes the installation of a pre-qualified drum, wiper blade, doctor blade, PCR and magnetic roller.

3. Recycle

All packaging materials, used hoppers and non-conforming components are disassembled and recycled.

8. 100% Post Testing

Each and every cartridge is post tested using industry standard print tests to ensure outstanding performance and quality.

4. Split & Clean

Empty cartridges are carefully disassembled and cleaned using a proprietary state-of-the-art process. Hoppers are precisely split using custom built automated equipment.

9. Packaging

All cartridges receive a final inspection to ensure they conform to our stringent quality standards. Cartridges are cleaned, polished, heat-sealed in a static resistant bag and boxed.

5. Digital Auto Filling

Using automated filling equipment that West Point Products develops in-house, each cartridge is precisely filled to the exact specified weight. Toner hoppers are filled with premium toners, which are technically matched to the OPCs (drum) for optimal yields and printer performance.

10. Quality Control

Each step in our manufacturing process is monitored by dedicated Quality Control experts. Each step in our production process undergoes regular and spot inspections to guarantee that our products meet the expectations of the consumer.
